Mica insulator is a kind of insulating material commonly used in power equipment, which is composed of mica sheet and insulating adhesive. Mica sheet is a natural mineral material with excellent insulating properties, its main component is silicate minerals, which has excellent insulating properties, high temperature resistance and chemical corrosion resistance. Mica insulators are often used in insulating gaskets, insulating washers, isolation plates and other components in power equipment to isolate and insulate conductive parts to prevent current leakage and short circuits. Mica insulators have the following characteristics: Excellent insulation performance: Mica has good insulation performance, which can effectively isolate current and prevent electrical equipment from leakage or short circuit. High temperature resistance: Mica insulators can maintain stable insulation performance in high temperature environments, and are not easy to melt or deform. Chemical corrosion resistance: Mica has good chemical corrosion resistance and is not easily corroded by chemical substances such as acid and alkali. Wear resistance: Mica insulators have good wear resistance and can maintain stable insulation performance in long-term use.
