Micro Axial Piston Pumps are compact and miniature hydraulic pumps that utilize reciprocating motion of axially arranged pistons within cylinders to transport liquids. These pumps are characterized by their high pressure capabilities, high efficiency, compact structure, and lightweight design. Suitable for applications requiring high-pressure, low-flow, and high-precision liquid transfer, Micro Axial Piston Pumps typically consist of a pump body, pistons, cylinders, a drive shaft, and control valves. Through the rotational motion of the drive shaft, the pistons reciprocate within the cylinders, enabling the suction and discharge of liquids.
