## Abstracts

Microbalances are generally designed to measure, weigh and provide data on the tiniest of samples. Most models can effectively provide data for samples weighing between 6 and 0.0001 milligrams. These types of balances are generally used to weigh highly valuable substances in minute quantities. Labotec also stock an extensive range of ultramicro balances, which are designed to weigh and provide data on even smaller samples! These units typically come standard with draft shields so that dust and other foreign particles do not make their way into the dish and corrupt data and materials being worked on.
