## Abstracts

According to our (Global Info Research) latest study, the global Micro Brushless Coreless Motor market size was valued at US\$ 101 million in 2025 and is forecast to a readjusted size of US\$ 1644 million by 2032 with a CAGR of 48.8% during review period.

Micro Brushless Coreless Motors are characterized by an ironless stator structure with a cup-shaped winding, eliminating core losses to achieve superior energy conversion efficiency and minimal electromagnetic interference compared to traditional motors. The 'micro' designation emphasizes a compact diameter typically not exceeding 40mm, which drastically reduces weight and rotational inertia to enable high-speed rotation and rapid dynamic response necessary for precise control. By utilizing electronic commutation via Hall sensors, these motors overcome the wear and maintenance limitations of brushed counterparts, ensuring extended operational lifespan and stable running characteristics under varying loads. This architecture facilitates high power density and low friction operation, making it an ideal solution for applications demanding strict space constraints and high-performance servo control. In 2025, global Micro Brushless Coreless Motor production reached approximately 445 k units with an average global market price of around US\$220 per unit.
