Abstracts

According to our (Global Info Research) latest study, the global Micro-channel CPU Water Block market size was valued at US\$ 74.1 million in 2024 and is forecast to a readjusted size of USD 118 million by 2031 with a CAGR of 6.9% during review period.

The basic components of a liquid cooling system include a pump, a radiator, and a water block. The water block is mounted on the CPU and removes the heat from the CPU and conducts it to the radiator. The radiator then dissipates the heat into the air, and the pump circulates the water back to the water block.
