Abstracts

According to our (Global Info Research) latest study, the global Micro CHP System market size was valued at USD 467.8 million in 2023 and is forecast to a readjusted size of USD 771.5 million by 2030 with a CAGR of 7.4% during review period.

Micro CHP (Combined Heat and Power) systems are small-scale power generation units that produce both electricity and heat for use in buildings. These systems are also known as cogeneration systems and typically generate electricity through the combustion of natural gas, propane, or other fuels.

The heat produced during the electricity generation process is captured and used for space heating, hot water production, or other heating applications. This makes Micro CHP systems more energy-efficient than traditional power generation methods that produce electricity and waste heat separately.

Micro CHP systems can be used in residential, commercial, and they are particularly useful in situations where there is a high demand for both electricity and heat. They are also a good option for reducing energy costs and greenhouse gas emissions.

Global key players of Micro CHP System include Viessmann, Aisin, BDR Thermea Group, etc. The top three players hold a share over 80%. Europe is the largest production region, has a share about 66%, followed by North America, with share 31%. In terms of product type, Fuel Cell is the largest segment, occupied for a share of 54%, and in terms of application, Residential has a share about 92%.
