According to our (Global Info Research) latest study, the global Micro CT System market size was valued at US\$ 241 million in 2025 and is forecast to a readjusted size of US\$ 363 million by 2032 with a CAGR of 6.1% during review period.

A Micro CT (Micro-Computed Tomography) System is a high-resolution imaging device that uses X-rays to create detailed 3D images of the internal structure of small objects without destroying them. It operates on the same principle as medical CT scanners but at a much finer scale—typically with resolutions down to a few micrometers—making it ideal for analyzing the internal features of materials, biological specimens, electronic components, or small industrial parts. Micro CT is widely used in fields like materials science, biomedical research, electronics, and quality control, enabling non-destructive inspection of cracks, voids, porosity, and structural integrity with exceptional clarity.

The Micro CT system market is driven by increasing demand for non-destructive testing (NDT) and high-resolution imaging across industries such as healthcare, materials science, electronics, and aerospace. Growth in biomedical research, especially in preclinical imaging and bone structure analysis, is fueling adoption in academic and research institutions. In the industrial sector, rising quality standards and the need for micro-scale inspection of components, such as batteries, 3D-printed parts, and semiconductor devices, are accelerating usage. Additionally, advances in X-ray source technology, image processing software, and automated analysis tools are making Micro CT systems more accessible, precise, and efficient, further boosting market growth.
