The global Micro Diaphragm Water Pump market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A micro diaphragm water pump is a small water pump typically used in applications requiring low flow, low pressure. This kind of water pump adopts a diaphragm structure, usually including an elastic diaphragm, which is mechanically or electrically deformed to achieve water pumping. The characteristics of micro diaphragm water pumps include simple structure, small size, light weight, and low energy consumption. They are suitable for some occasions that do not have high pumping requirements. Due to its compact design, it is commonly used in medical equipment, laboratory instruments, spray systems, gas sampling and other fields.
