Abstracts

Micro-Encapsulation Fastening are used to solve vibration loosening problems on Bolts, nuts and other threaded fasteners, as well as leakage problems by applying sealants under the head of Screws and Bolts, replacing “O Rings” and/or gaskets and rubber washer. The pre-applied threadlocker of Micro-Encapsulation Fastening remains inactive until the coated fastener is assembled onto the mating part. During the assembly the micro capsules are ruptured, initiating the polymerization process, curing the assembly quickly at room temperature, providing reliable locking and immediate sealing properties to the assembly.
