Abstracts

According to our (Global Info Research) latest study, the global Micro Gravure Coating Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Micro gravure coating machine is a device that uses the micro gravure coating process to coat the surface of the substrate. Micro gravure coating is a gravure roll engraved with patterns or cells to provide a specific coating volume. It is used in a reverse kiss coating method in which the roll is partially submerged in a pan of solution. The roll rotates in the opposite direction of the web, and the cells pick up the coating solution. The flexible doctor blade lightly smoothes off the excess and the precisely measured solution in the cells is then transferred to the web. It is used to coat a variety of products, for imaging, electronics, packaging, coated thin film batteries, and other specialty applications.

The Global Info Research report includes an overview of the development of the Micro Gravure Coating Machine industry chain, the market status of Lithium Battery Separator (
