Micro INS is a micro-inertial navigation system based on micro-electromechanical systems (MEMS) sensor technology. The micro-inertial navigation system is a type of inertial navigation system and has the characteristics of autonomous navigation. It does not rely on external information and does not radiate energy to the outside. Micro-inertial navigation systems have technical characteristics such as miniaturization, high precision, autonomy, and low cost. With the reduction of costs and the maturity of technology, micro-inertial navigation systems will be applied and promoted in more fields.
