Abstracts

MicroLED is an emerging flat panel display technology. As the name implies, microLED displays consist of arrays of microscopic LEDs forming the individual pixel elements. When compared to the widespread LCD technology, microLED displays offer better contrast, response times, and energy efficiency.

According to our (Global Info Research) latest study, the global Micro LED Display market size was valued at USD 7 million in 2022 and is forecast to a readjusted size of USD 63 million by 2029 with a CAGR of 36.6% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Along with OLEDs, microLEDs are primarily aimed at small, low-energy devices such as smartwatches and smartphones. OLED and microLED both offer greatly reduced energy requirements compared to conventional LCD systems. Unlike OLED, microLED is based on conventional GaN LED technology, which offers far higher total brightness than OLED produces, as much as 30 times, as well as higher efficiency in terms of lux/W. It also does not suffer from the shorter lifetimes of OLED.
