Abstracts

According to our (Global Info Research) latest study, the global Micro OLED market size was valued at US\$ 821 million in 2025 and is forecast to a readjusted size of US\$ 1368 million by 2032 with a CAGR of 7.9% during review period.

Micro OLED, also known as OLED microdisplay or OLED-on-Silicon, is an ultra-compact high-pixel-density display that integrates OLED emissive layers on a silicon CMOS backplane. It typically has a diagonal size of about 0.2?1.5 inches while delivering Full HD, 2K or even 4K-class resolution, with self-emission, high contrast, fast response, wide color gamut, low power consumption and compact form factor. Unlike conventional smartphone OLED panels made on glass or flexible PI substrates, Micro OLED is fabricated on semiconductor wafers with integrated driving circuits and pixel arrays, making it suitable for near-eye displays, electronic viewfinders, night vision, medical headsets and industrial wearables. In 2025, the global Micro OLED sales is estimated at about 19,000 k pcs, with an average price around 42 US\$/Pcs. The Micro OLED value chain starts with CMOS silicon backplanes, OLED emissive materials, fine metal masks, color filters, encapsulation materials, driver ICs, cover glass and semiconductor/OLED manufacturing equipment.

The growth of the Micro OLED market is primarily driven by the need for high-pixel-density, high-contrast, low-latency and compact displays in near-eye devices. Conventional LCD, LCOS and glass-based OLED panels struggle to meet the combined requirements of high PPI, low power consumption and compact form factor in lightweight headsets, while OLED-on-Silicon enables smaller pixels and higher circuit integration through a semiconductor backplane. Continuous improvements in brightness, resolution and production capacity by companies such as Sony, eMagin, SeeYA and BOE, together with high-end products such as Apple Vision Pro, have

validated Micro OLED as a key display technology for spatial computing. Growing demand from AI glasses, MR headsets, drone FPV systems, thermal imaging and medical visualization is expected to expand Micro OLED from professional imaging and defense niches toward broader consumer electronics and industrial wearable applications.
