The global Micro-perforation Laser Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Micro-perforation Laser Machine is a kind of laser drilling processing equipment, which uses high-energy laser beams to process micro-holes on materials. Due to the high power density of the laser beam used, the Micro-perforation Laser Machine can accurately control parameters such as aperture, position, roundness, and precision, and the processing speed is fast. It is a non-contact drilling equipment. Micro-perforation Laser Machine are mainly used in the field of metal and alloy drilling, such as processing copper, magnesium, aluminum, titanium, silver, gold and their alloys, and steel, etc., and can also be used to process brittle and hard materials, such as glass, ceramics, silicon, etc. materials etc. This report studies laser micro-hole drilling machines with a punching range of less than 0.1mm.
