The micro-steamer and oven is a home appliance that integrates the three main functions of microwave oven + steamer + oven. Micro, it is mainly an ultra-short electromagnetic wave, which can quickly change the polar molecules in the water molecule through ultra-high frequency electromagnetic waves, and then achieve the effect of heating food. It heats up very quickly and is often used to defrost and reheat food. Steaming is similar to the way of high-temperature steaming that is usually used in households. For example, in Guangdong, food is mainly steamed, which can not only sterilize bacteria but also retain the original flavor of food. Roasting uses a high temperature method to cook the food.
