Abstracts

According to our (Global Info Research) latest study, the global Micro Switch market size was valued at USD 791.2 million in 2023 and is forecast to a readjusted size of USD 942.2 million by 2030 with a CAGR of 2.5% during review period.

Micro switch, also trademarked and frequently known as miniature snap-action switch, is an electric switch that is actuated by very little physical force, through the use of a tipping-point mechanism, sometimes called an 'over-center' mechanism.

Switching happens reliably at specific and repeatable positions of the actuator, which is not necessarily true of other mechanisms. They are very common due to their low cost and durability, greater than 1 million cycles and up to 10 million cycles for heavy duty models. This durability is a natural consequence of the design.

The defining feature of micro switches is that a relatively small movement at the actuator button produces a relatively large movement at the electrical contacts, which occurs at high speed (regardless of the speed of actuation). Most successful designs also exhibit hysteresis, meaning that a small reversal of the actuator is insufficient to reverse the contacts; there must be a significant movement in the opposite direction. Both of these characteristics help to achieve a clean and reliable interruption to the switched circuit.

Global key players of Micro Switch include Omron, ALPS, ZF(CHERRY) and Johnson Electric(Burgess), etc. The top four players hold a share over 40%. Japan is the largest market, has a share about 35%. In terms of product type, Ultraminiature Type is the largest segment, occupied for a share of about 37%, and in terms of application, Electronic Equipment has a share about 40 percent.
