According to our (Global Info Research) latest study, the global Micro-Turbine Flow Meter market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A micro-turbine flow meter, also known as an axial flow or Pelton wheel flow meter, is a device used to measure the flow rate of low-volume clean gases or liquids and is ideal for measuring consistent flow rates. A micro-turbine flow meter uses a tiny micro-turbine impeller (similar in size to a U.S. dime) for volumetric measurement, which rotates as the liquid/gas flows through the flow meter. As the flow passes through the flow meter, it is directed onto the extremely small teeth of the impeller through a precision machined nozzle. The size of this nozzle is based on the flow range of the device. The rotational speed of the micro-turbine impeller increases in proportion to the volumetric flow rate.
