According to our (Global Info Research) latest study, the global Micro-Ultrasound Systems market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The Micro-Ultrasound Systems are used in producing sound waves and then transmit them in 2D or 3D images which are obtained from passing these sound waves through the living tissues, these tissues then reflect backs the sound waves to the source which then generates the image. This is primarily considered a high-resolution imaging technique. Micro-ultrasound is a new, improved ultrasound technology that operates at 29 MHz compared to 7.5 MHz in standard ultrasound, which leads to a 300 percent improvement in resolution.
