Micro vessel clamp is a surgical instrument used to temporarily occlude or clamp off small blood vessels or delicate structures during microsurgical procedures. It is designed to provide precision and control over the level of occlusion without causing damage or compromising blood flow to the surrounding tissues. The micro vessel clamp typically consists of two small, curved blades with serrated jaws that can be closed using a ratchet or locking mechanism. These clamps allow the surgeon to secure small vessels or tissues during procedures like microvascular surgery, nerve repair, or organ transplantation.
