The global Micro Vortex Mixer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Micro vortex mixer is a new type of mixing equipment, which is widely used in radioimmunoassay and other experiments that require mixing operations. It is a commonly used equipment in biochemistry, chemical laboratories, hospital wards, laboratories, etc. It has fast mixing speed, Mix thoroughly, and the liquid becomes a vortex, which can completely mix the test solution attached to the tube wall. It has small volume, low power consumption, and convenient operation. It is suitable for mixing liquids in general test tubes (beakers, flasks, and separating funnels). Even, for some insoluble drugs such as erythromycin staining solution, it is also easy to mix, the effect is remarkable, the mixed liquid does not need electric stirring and magnetic stirring, so the mixed liquid is not affected by external pollution and magnetic field.
