According to our (Global Info Research) latest study, the global Micro X-ray Diffraction market size was valued at US\$ 28.4 million in 2024 and is forecast to a readjusted size of USD 38.4 million by 2031 with a CAGR of 4.5% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Microdiffraction (also called X-ray microdiffraction, micro X-ray diffraction or μ XRD) analysis uses a very narrow beam to make highly localized XRD measurements over a very small area. This is achieved using a specialized incident beam collimator that reduces the outgoing X-rays. Using a single capillary, an incident X-ray beam of approximately 50 μ m in diameter can be produced. Microdiffraction techniques are typically used on small or inhomogeneous samples with crystallites of varying composition, lattice strain or preferred orientation.
