According to our (Global Info Research) latest study, the global Microalgae Fertilizers market size was valued at US\$ 15470 million in 2025 and is forecast to a readjusted size of US\$ 30030 million by 2032 with a CAGR of 10.0% during review period.

Organic fertilizers made from different kinds of microalgae are known as microalgae fertilizers. The microalgae fertilizers market offers solutions in the form of products that are abundant in micronutrients like iron, zinc, and manganese, as well as essential nutrients like potassium, phosphorus, and nitrogen. They are made by growing and processing biomass from microalgae, which is subsequently combined to create liquid or solid fertilizer solutions.

One of the primary drivers is the growing awareness among farmers and agricultural stakeholders regarding the environmental and economic benefits of microalgae-based fertilizers. For instance, studies have shown that using microalgae-based fertilizers can reduce the carbon footprint of agricultural practices by up to 20%. Microalgae offer a renewable and sustainable source of nutrients, including nitrogen, phosphorus, and potassium, essential for plant growth. Unlike conventional chemical fertilizers, microalgae-based fertilizers are biodegradable, non-toxic, and environmentally friendly, making them attractive options for environmentally conscious consumers and agricultural producers.
