Microphytes or microalgae are microscopic algae, typically found in freshwater and marine systems living in both the water column and sediment. They are unicellular species which exist individually, or in chains or groups. Depending on the species, their sizes can range from a few micrometers (μm) to a few hundreds of micrometers. Unlike higher plants, microalgae do not have roots, stems, or leaves.

Global microalgae key players are DIC Corporation, Cyanotech Corporation, Algaetech Group etc. Top 5 companies occupied about 45% market share. China is the largest market with about 35% market share. North America is follower, accounting for about 20% market share. In terms of product, spirulina is the largest segment, with a share about 60%. And in terms of application, the largest application is health, followed by feed.
