The microbial activity ATP analyzer is an analytical instrument used to measure the intracellular adenosine triphosphate (ATP) content of microorganisms. ATP is a key molecule in cellular energy metabolism, and its content is usually directly related to the activity level of microorganisms. By detecting the ATP content in the sample, the activity, growth status and contamination level of the microorganism can be quickly evaluated. Microbial activity ATP analyzers are often used in food safety, environmental monitoring, bioengineering and other fields, providing a fast and accurate method to evaluate the biomass of microorganisms.
