According to our (Global Info Research) latest study, the global Microbial Agricultural Inoculants market size was valued at USD 4354.5 million in 2023 and is forecast to a readjusted size of USD 9320.3 million by 2030 with a CAGR of 11.5% during review period.

Microbial inoculants also known as soil inoculants are agricultural amendments that use beneficial endophytes (microbes) to promote plant health. Many of the microbes involved form symbiotic relationships with the target crops where both parties benefit (mutualism).

Microbial inoculants offer a natural and sustainable alternative to synthetic agricultural inoculants, as they improve soil health, increase nutrient availability and prevent disease. In addition, the use of microbial inoculants can help reduce the environmental impact of agriculture by reducing the amount of synthetic inputs required and promoting more sustainable agricultural practices. As a result, there is an increasing demand for microbial inoculants from farmers looking for ways to reduce their environmental footprint and produce healthier, more sustainable crops.

The Global Info Research report includes an overview of the development of the Microbial Agricultural Inoculants industry chain, the market status of Oilseeds and Pulses (Soil Inoculation, Seed Inoculation), Fruits and Vegetables (Soil Inoculation, Seed Inoculation), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Microbial Agricultural Inoculants.
