Abstracts

The global Microbial API market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Microbial APIs (Application Programming Interfaces) refer to software interfaces that allow developers to interact with microbial data and perform various operations using that data. APIs can provide access to a range of microbial data, such as genomic data, microbiome data, and other types of microbiological data.

Microbial APIs can be used for a variety of purposes, including research, drug discovery, diagnostics, and more. For example, researchers can use microbial APIs to analyze microbial genomic data to better understand the role of specific genes in microbial function or to identify potential drug targets. Similarly, pharmaceutical companies can use microbial APIs to screen potential drug candidates against a database of microbial genomes to identify compounds with antimicrobial properties.

There are several microbial APIs available, including NCBI's Entrez API, KEGG API, and IMG API, among others. These APIs provide access to a wealth of microbial data and can be used in a variety of programming languages, making it easy for developers to integrate microbial data into their applications.

This report studies the global Microbial API demand, key companies, and key regions.
