## Abstracts

The global Microbial Biosurfactants market size is expected to reach \$ 57.81 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Biosurfactants can be defined as the surface-active biomolecules produced by microorganisms with wide-range of applications. In recent years, due to their unique properties like specificity, low toxicity and relative ease of preparation, these surface-active biomolecules have attracted wide interest.

The Biosurfactant industry can be broken down into several segments, Rhamnolipids, Sophorolipids, etc.

At present, the main products of Microbial Biosurfactants are Rhamnolipids, Sophorolipids and Mannosylerythritol Lipids (MEL). Rhamnolipids has many large-scale production enterprises and the largest consumption. In 2023, the consumption share of Rhamnolipids was 65%. Followed by Sophorolipids, the share of consumption is about 32%.

This report studies the global Microbial Biosurfactants production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Microbial Biosurfactants and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Microbial Biosurfactants that contribute to its increasing demand across many markets.
