## Abstracts

The global Microbial Deodorizer market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Microbial deodorant is produced by following the principles of microecological engineering, fully drawing on advanced composite microbial technology, using microecological engineering technology, and using modern biotechnology. It is composed of photosynthetic bacteria, actinomycetes, lactic acid bacteria, yeast, Bacillus, digestive enzymes and other probiotics and metabolites. It can oxidatively decompose a variety of toxic and harmful pollutants, purify water quality, and improve the environment. Create a benign ecological environment. The new biological deodorant formed together can effectively remove malodorous gases such as hydrogen sulfide and ammonia.

This report studies the global Microbial Deodorizer production, demand, key manufacturers, and key regions.
