According to our (Global Info Research) latest study, the global Microbial Genetically Modified Food Rapid Detection Test Paper market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Personal genetic testing is a testing method to prevent diseases caused by genes through testing and screening. Although blood or urine tests on the human body can understand physiological indicators, they cannot predict the risk of underlying abnormal diseases and genetic diseases. Therefore, doctors can help patients develop comprehensive prevention and early treatment plans through genetic testing. Genetic testing usually uses cell tissue from the oral mucosa. It is painless and can be used once for a lifetime.
