The global Microbial Genetically Modified Food Rapid Detection Test Paper market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Personal genetic testing is a testing method to prevent diseases caused by genes through testing and screening. Although blood or urine tests on the human body can understand physiological indicators, they cannot predict the risk of underlying abnormal diseases and genetic diseases. Therefore, doctors can help patients develop comprehensive prevention and early treatment plans through genetic testing. Genetic testing usually uses cell tissue from the oral mucosa. It is painless and can be used once for a lifetime.
