## Abstracts

According to our (Global Info Research) latest study, the global Microbial Inoculants in Agricultural market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Microbial inoculants refer to viable bacterial preparations made from the fermentation broth of the target microorganisms (effective bacteria) after industrial production and expansion, using porous materials as adsorbents (such as peat, vermiculite) to absorb the bacterial cells. This inoculant is used for seed dressing or root dipping, and has the functions of directly or indirectly improving soil, restoring soil fertility, preventing soil-borne diseases, maintaining the balance of rhizosphere microbial flora, and degrading toxic substances.
