Microbial laboratory vacuum pump is a kind of vacuum pump specially used for laboratory microbial cultivation, filtration and purification. It pumps air or gas out of the container by means of a mechanical pump to create a certain vacuum environment for better handling of microbial experiments. Vacuum pumps for microbial experiments are usually designed with silent technology, featuring low noise, high efficiency, fine adjustment, safety and reliability, etc., and can be used with filters and suction heads of various specifications to meet different experimental operation requirements. It is not a single device, it can be used in conjunction with other instruments. Such as vacuum filtration, microbial detection, waste liquid extraction, rotary evaporator, vacuum drying oven, freeze dryer and other equipment.
