According to our (Global Info Research) latest study, the global Microbiome In Vivo Gene Editing System market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Microbiome in vivo gene editing systems are a set of biotech tools designed to achieve specific goals or improve specific performance by precisely editing genes in the microbiome. The development of these systems stems from the recognition of the critical role of microorganisms in the environment, agriculture, biopharmaceuticals, and other fields. With a deeper understanding of microbial diversity and function, microbiome in vivo gene editing systems will be applied to a wider range of microorganisms, including bacteria, yeasts, fungi, etc., for improved industrial production and environmental applications. Typical products include Mammoth Biosciences' CRISPR and Synthego's CRISPR.
