According to our (Global Info Research) latest study, the global Microbubble Generator Pump market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Microbubble Generator Pumps are a very effective method of separating suspended solids and emulsified oils from industrial waste streams. During normal operation tiny bubbles are produced and mixed with the wastewater containing suspended pollutants. The small bubbles attach to the suspended particles, giving them a net positive buoyancy. These floating particles and clusters of bubbles rise smoothly to the surface to form floats, which are removed by skimming.
