Abstracts

The global Microcontroller Unit Power Management Integrated Circuit (MCU PMIC) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

MCU PMICs provide a single solution for managing various power rails, including step-up, step-down, and LDO regulators, along with battery charging and protection. These PMICs are usually small in size and provide high power efficiency, which is especially important in portable devices such as smartphones, tablets, and wearables.

MCU PMICs often include multiple voltage regulators, each with programmable output voltage and current limits, as well as protection features such as overvoltage, undervoltage, and overcurrent protection. Some MCU PMICs may also include features such as thermal management, power sequencing, and power monitoring.

One of the primary benefits of MCU PMICs is that they can significantly reduce the number of external components needed in a system, which can help reduce the overall system size and cost. Additionally, MCU PMICs can provide accurate voltage regulation and power management, which can help extend the battery life of portable devices.

MCU PMICs are commonly used in a wide range of applications, including smartphones, tablets, wearable devices, portable medical equipment, and industrial control systems, to name a few.
