According to our (Global Info Research) latest study, the global Microcrystalline Cellulose (MCC) market size was valued at US\$ 1373 million in 2024 and is forecast to a readjusted size of USD 1986 million by 2031 with a CAGR of 5.5% during review period.

Microcrystalline cellulose (MCC) is an odorless, tasteless, porous white powder derived from wood pulp or refined cotton. With a wide range of chemical, technical, and economic benefits, MCC is widely used in the pharmaceutical industry, food industry etc.

The microcrystalline cellulose (MCC) market has been experiencing steady growth, driven by its widespread use across various industries such as pharmaceuticals, food & beverages, cosmetics, and personal care. In the pharmaceutical sector, MCC is primarily used as a binder and disintegrant in tablet formulations, contributing to the increasing demand for generic and over-the-counter drugs. The growing demand for functional foods and dietary supplements, where MCC serves as a low-calorie, high-fiber ingredient, is also propelling market growth. Additionally, the rising consumer preference for clean-label products and natural additives is enhancing the appeal of MCC as a non-toxic, plant-based ingredient.

Technological advancements in the production of MCC, along with the increasing focus on sustainability, are also shaping market dynamics. Manufacturers are exploring more eco-friendly production processes and alternatives derived from renewable resources. In addition, the growing trend towards the use of MCC in biodegradable packaging and other green technologies is expanding its applications beyond traditional sectors. As

consumer awareness about health, sustainability, and product transparency continues to rise, the MCC market is expected to maintain a robust growth trajectory in the coming years, with a focus on innovation and diversification of product offerings.
