## Abstracts

According to our (Global Info Research) latest study, the global Microencapsulated Feed Additives market size was valued at USD 26 million in 2022 and is forecast to a readjusted size of USD 39 million by 2029 with a CAGR of 6.0% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Microencapsulated feed additives are better protected against external influences occurring within the feed manufacturing processes, such as mixing and pelleting etc. Steam and heat would accelerate the evaporation losses drastically. Here, encapsulation can prevent losses of volatile and heat sensitive substances. Not less important than the protection during feed processing is the stabilization of active substances during feed storage. Active plant substances are protected against oxidation and unwanted reactions. Microencapsulation improves therefore the storage stability of feed additives.
