Abstracts

The global Microencapsulated Feed Additives market size is expected to reach \$ 39 million by 2029, rising at a market growth of 6.0% CAGR during the forecast period (2023-2029).

Microencapsulated feed additives are better protected against external influences occurring within the feed manufacturing processes, such as mixing and pelleting etc. Steam and heat would accelerate the evaporation losses drastically. Here, encapsulation can prevent losses of volatile and heat sensitive substances. Not less important than the protection during feed processing is the stabilization of active substances during feed storage. Active plant substances are protected against oxidation and unwanted reactions. Microencapsulation improves therefore the storage stability of feed additives.

This report studies the global Microencapsulated Feed Additives production, demand, key manufacturers, and key regions.
