Abstracts

The global Microencapsulated Iron Fortification Ingredients market size is expected to reach $ 367 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

In 2025, the sales volume of microencapsulated iron fortification ingredients is projected to be approximately 24,000 metric tons, with an average price of around $9,500 per metric ton.

Microencapsulated iron fortification ingredients are food-grade nutritional additives produced by encapsulating iron sources—such as ferric pyrophosphate, ferrous sulfate, or ferrous fumarate—at the micron scale using lipid, protein, polysaccharide, or phospholipid systems. This process aims to reduce metallic off-flavors and reactivity while enhancing dispersion stability, processing stability, or gastrointestinal tolerance. The upstream sector comprises food-grade iron salts, wall materials (lipids, proteins, and polysaccharides), and microencapsulation equipment, while downstream applications include infant and toddler foods, functional beverages, dairy products, grain and bakery products, and dietary supplements.
