Microfiber Artificial Leather is an artificial leather material that mimics real leather. It is usually made from a coating of polyurethane (PU) or polyvinyl chloride (PVC) applied to microfiber fabric. Synthetic leather with microfiber nonwoven fabric as the base fabric and PU resin as the coating is called microfiber super real leather (also called microfiber synthetic leather). The process of making other synthetic leather begins with laying down strips of fabric and coating them with polyurethane resin. But for microfiber leather, it starts with a synthetic fiber mat, using a microfiber leather non-woven fabric with a three-dimensional structure as the base fabric, which is interwoven and bonded together using polyurethane. Microfiber leather is considered the best synthetic material. It is considered the best grade of artificial leather available due to its durability, cost, and manufacturing process. Microfiber leather also has advantages that real leather does not have, such as not peeling off and aging quickly.

In the global market, Microfiber Artificial Leather core manufacturers include Kuraray, TORAY, and Asahi Kasei, ect . The top four companies within this industry hold more than 50% of the market share.
