Abstracts

Microfiber is synthetic fiber finer than one denier or decitex/thread. However, recently, there is no uniform definition of international fine fibers. In Japan, microfiber is less than 0.3 dtex. German Textile Association monofilament polyester fiber linear density of less than 1.2 dtex, polyamide fiber linear density of less than 1.0 dtex is called superfine fibers; and Montefibre company 's linear density of less than 0.55 dtex polyester fiber called microfiber; US PET Commission defines that 0.3 dtex ~ 1.0 dtex fiber is defined as ultra-fine fibers; AKZO company believes microfiber upper limit should be 0.3 dtex, but most people accepted definition dpf 1.0 dtex fibers are microfibers and dpf 0.1 dtex fibers called ultrafine fibers. In china microfiber is less than 2.2 dtex and most global manufacturers produce the microfibers that are less than 0.3 dtex.

The most common types of microfibers are made from polyesters, polyamides (e.g., nylon, Kevlar, Nomex, trogamide), or a conjugation of polyester, polyamide, and polypropylene (Prolen). Microfiber is used to make mats, knits, and weaves for apparel, upholstery, industrial filters, and cleaning products. The shape, size, and combinations of synthetic fibers are selected for specific characteristics, including softness, toughness, absorption, water repellency, electrostatics, and filtering capabilities.

In the report, we define 0-0.3 dtex is short microfiber and 0.3-1.2 dtex is long microfiber. And the volume of microfiber is calculated by all the microfiber less than 1.2 dtex. In fact, microfiber is generally used directly in downstream products. In the market, the sales of microfiber only hold a small part of total microfiber.

Scope of the Report:

This report focuses on the Microfiber in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Since high-performance microfiber entered the market, it had got great attention. As a new material, it is mainly applied to make microfiber leather and microfiber cleaning cloths. During the production process of microfiber leather or microfiber cleaning cloth, microfiber is also produced. Over the past few years, demand for microfiber is relatively stable. In the future, downstream demand will continues improving with the improvement of people's quality of life.

Global market is expected to witness significant growth on account of rising applications, so in the next few years, microfiber consumption will show a trend of steady growth. On product prices, the slow downward trend in recent years will maintain in the future.

The worldwide market for Microfiber is expected to grow at a CAGR of roughly 2.4% over the next five years, will reach 720 million US\$ in 2023, from 630 million US\$ in 2017, according to a new GIR (Global Info Research) study.
