Microfinishing films are precision-coated abrasive products used for fine surface finishing, polishing, and dimensioning of materials such as metals, ceramics, and composites. They consist of a polyester film backing coated with micron-graded abrasive particles like aluminum oxide or silicon carbide, bonded with a durable resin. These films provide consistent, uniform cutting action and are commonly used in industries such as automotive, aerospace, and electronics for applications like finishing engine parts, shafts, and rollers. Their uniform abrasive surface ensures tight tolerances and superior surface quality compared to traditional abrasive papers or stones.
