According to our (Global Info Research) latest study, the global Microkernel Operating System market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A Microkernel Operating System is a type of operating system architecture that is designed to minimize the functionality provided by the kernel, focusing only on the most essential components. Unlike traditional monolithic kernels, where the kernel handles a wide range of services (such as device drivers, file systems, network stack, etc.), a microkernel reduces the kernel's responsibilities to a minimal set, with most of the services running in user space.
