Abstracts

One of the challenges of laser micromachining is removing only the desired material (usually by localized heating) while minimizing the HAZ of any remaining material. Precise delivery of laser radiation with near-perfect beam quality to the target area is a necessary step to achieve the desired results. Shorter wavelengths and narrower pulse widths facilitate higher quality results.

According to our (Global Info Research) latest study, the global Micromachining Laser market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.
