Micron Silver Micron Powder is a special form of pure silver with a larger and spongy outer surface. Their antimicrobial profile is comparable to that of nanosilver. The particle size of this very porous silver varies between 5 and 20 μm . They are therefore approximately 1,000 times larger than nanoparticles. Because of their size, these silver micron particles cannot pass through the skin, so they are ideal for local applications. Thanks to their large external surface, bacterial viral or fungal germs can be stopped and neutralized. These itch-relieving particles are also anti-inflammatory, antibacterial and antifungal. It is, therefore, possible to use them at the same time as other therapeutic treatments against neurodermatitis, psoriasis and damaged skin.
