The global Micronized Graphite Powder market size is expected to reach \$ 7460 million by 2032, rising at a market growth of 7.8% CAGR during the forecast period (2026-2032).

Micronized Graphite Powder refers to finely pulverized graphite materials with particle sizes typically ranging from sub-micrometer to 75 micrometers produced via mechanical pulverization and air classification processes. In 2025, global micronized graphite powder production reached approximately 1,714K ton, with an average global market price of around USD 2,500 per ton. A factory gross profit of USD 750 per ton with 30% gross margin. A single line full machine capacity production is around 15k ton per line per year. The upstream is dependent on graphite availability, equipment and technology. The downstream demand is concentrated in EV batteries, industrial manufacturing and semiconductor and electronics. Lithium-ion battery anodes for electric vehicles uses micronization raw flake graphite result in improved Li-ion battery energy density, Supports fast-charging and Reduces manufacturing defects by consistent particle size distribution. India market driven by strong manufacturing expansion and EV adoption acceleration. China market continued the EV expansion.
