According to our (Global Info Research) latest study, the global Micronized Polyethylene (PE) Wax market size was valued at USD 361.6 million in 2023 and is forecast to a readjusted size of USD 448.4 million by 2030 with a CAGR of 3.1% during review period.

Micronized polyethylene wax is the product of polyethylene wax after micronization processing. During the production of polyethylene, a small amount of oligomers, namely low molecular weight polyethylene, is also produced, which is also called high molecular wax and abbreviated as polyethylene wax. Because of its excellent cold resistance, heat resistance, chemical resistance and abrasion resistance, it has been widely used.

The method of micronization can use Jet-Microniser or Microniser/Classifier production process, that is, the coarse wax is gradually broken into particles after violently colliding with each other at high speed. It is collected by the centrifugal force and blown out under weightlessness.

The global key manufacturers of micronized polyethylene (PE) wax include Clariant, Honeywell, BASF, etc. These three companies account for more than 50% of the global market share. Asia Pacific is the major consumption market for micronized polyethylene wax, with over 40% market share. Oxidized polyethylene wax powder is the major type with 89% market share. Currently, micronized polyethylene wax is mainly used in coatings, and this application accounts for about 78% share.
