Abstracts

The global Micronized Polyethylene (PE) Wax market size is expected to reach \$ 448.4 million by 2029, rising at a market growth of 3.1% CAGR during the forecast period (2023-2029).

The global key manufacturers of micronized polyethylene (PE) wax include Clariant, Honeywell, BASF, etc. These three companies account for more than 50% of the global market share. Asia Pacific is the major consumption market for micronized polyethylene wax, with over 40% market share. Oxidized polyethylene wax powder is the major type with 89% market share. Currently, micronized polyethylene wax is mainly used in coatings, and this application accounts for about 78% share.

Micronized polyethylene wax is the product of polyethylene wax after micronization processing. During the production of polyethylene, a small amount of oligomers, namely low molecular weight polyethylene, is also produced, which is also called high molecular wax and abbreviated as polyethylene wax. Because of its excellent cold resistance, heat resistance, chemical resistance and abrasion resistance, it has been widely used.

The method of micronization can use Jet-Microniser or Microniser/Classifier production process, that is, the coarse wax is gradually broken into particles after violently colliding with each other at high speed. It is collected by the centrifugal force and blown out under weightlessness.

This report studies the global Micronized Polyethylene (PE) Wax production, demand, key manufacturers, and key regions.
