According to our (Global Info Research) latest study, the global Microporous Lithium Battery Copper Foil for Power Battery market size was valued at US\$ 87.46 million in 2025 and is forecast to a readjusted size of US\$ 931 million by 2032 with a CAGR of 40.0% during review period.

Microporous Lithium Battery Copper Foil for Power Battery refers to a specialized current collector material designed for high-performance lithium-ion power battery systems, featuring a finely distributed microporous structure that enhances electrolyte wettability and shortens ion diffusion pathways while maintaining excellent electrical conductivity and mechanical integrity. Through controlled pore formation at the micro-scale, the material improves interfacial interaction between the electrode and electrolyte, reduces internal resistance, and supports uniform current distribution, thereby enabling improved fast-charging capability, higher energy efficiency, and extended cycle life under demanding operating conditions. In 2025, the capacity utilization rate reached 45% and the average gross margin was approximately 28%. Production in 2025 totaled 3,025 ton, with an average price of 28,100 USD/ton. The upstream primarily consists of high-purity cathode copper and specialized pore-forming additives, with representative suppliers including Jiangxi Copper, Tongling Nonferrous Metals, Freeport-McMoRan, and Glencore. The midstream focuses on precision electrochemical deposition, microporous structure regulation, and surface treatment to ensure uniform pore distribution and mechanical stability. The downstream mainly serves passenger and commercial vehicle markets, with key customers including Tesla, BYD, Volkswagen, Toyota, and Ford.
