## Abstracts

According to our (Global Info Research) latest study, the global Microporous Silica Insulating Board market size was valued at USD 438.3 million in 2022 and is forecast to a readjusted size of USD 652.9 million by 2029 with a CAGR of 5.9% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Microporous insulation is silica based material in the form of compacted powder or fibers with an average interconnecting pore size comparable to or below the mean free path of air molecules at standard atmospheric pressure. Microporous insulation may contain opacifiers to reduce the amount of radiant heat transmitted. This composition results in a material with exceptionally low thermal conductivity (lower than dormant air). Each board is individually encapsulated in polyethylene foil to make it resistant to moisture. It is also available in a flexible form with or without cloth encapsulation.
